

ALAN PONTON

UX / PRODUCT DESIGNER · DESIGNS AND SHIPS

SUMMARY

Product-minded UX designer who owns the full arc from problem framing through interaction and visual design, prototyping, and specifications, then ships the production build myself. I design under real constraints, partner with engineering in agile, and defend design decisions with best-practice reasoning and business rationale. Because I build what I design, my work is grounded in what actually ships.

SELECTED DESIGN WORK

UX Designer & Full-Stack Developer / 2100 Security, Security Operations Platform

2024 – PRESENT · SOLO · IN NIGHTLY PRODUCTION

Progressive web app designed and built for the five-person overnight security team I work on at a 33-floor Dallas high-rise. Replaced a broken legacy system; three documented production versions.

- Designed interface, interaction, and visual style end to end, then shipped the build myself: design intent survived with zero handoff loss.
- Derived hard constraints from observing officers in real conditions (low light, one-handed, mid-patrol): dark-by-default, high contrast, no horizontal scroll.
- Reversed my own V1 after it tested unreadable across a long shift: readability over aesthetics, driven by user feedback.
- Built a deterministic constraint-based scheduling engine honoring seven simultaneous rules on an availability foundation.

UX Designer & Full-Stack Developer / Lonnie's Locations, Group-Travel Platform

DEC 2025 – PRESENT · SOLO · LIVE WITH REAL GUESTS

End-to-end design and build for an independent travel advisor with a high-touch business and no digital infrastructure.

- Designed conversion-oriented reservation flows and a passwordless guest portal with status microcopy that turns database states into reassurance.
- Mined the advisor's inbox as a qualitative dataset to derive the FAQ architecture and AI knowledge base, with no research budget.
- Designed an AI concierge as a conversation-design problem first: deliberate refusal boundaries on pricing, medical, and refund questions.

UX Designer & Full-Stack Developer / ROSE, White-Label AI Front-Desk Agent

2025 – PRESENT · SOLO · PRE-REVENUE

Conversational AI intake product for small businesses, live at poweredbyrose.com; verified end to end through developer testing.

- Built the full lead-capture flow: conversational intake, database persistence, owner email notification, on a Next.js serverless stack.
- Integrated Claude tool calling so the agent takes structured actions while staying in voice; two-gate abuse protection on the public endpoint.

Additional Shipped Products · Solo, AI-augmented

2025 – PRESENT

MetroPlex Match, compatibility-first dating platform. Trip Buddy, AI travel companion used on a real cruise. FollowThisModel, AI-twin platform, pre-launch.
